

We are a business-to-business-technological company that supplies components and services of industrial variable engineering plastic flooring for many sided use.

By placing these vinyl panels you get an integrated, variable and compact floor for any commercial and private object with unique attributes in comparison with floors from other flooring.

The main advantage of these floors is their easy and quick assembling, variability and surface compatibility, a high mechanical strength and load-bearing capacity, flexibility at exchanging partial parts without operational constraints, easy maintenance and low price. Furthermore, it is possible to place these vinyl panels horizontally as well as vertically and also there, where it is very difficult with other products.

These vinyl panels also enable revitalization of those floors, by which the realization regarding input cost or technical construction complexity is too expensive or complicated.

Handling on this surface is very easy, walking as well as standing is safe and comfortable. The floor maintenance is relatively easy and quick; there is no need to use any uncommon relevant cleaners.

That is why these integrated, variable and compact vinyl panel floorings are matchless in comparison with other similar products.

- high mechanical strength
- chemical resistance
- long material durability
- climatic attribute constancy
- low combustibility
- heat insulation (reduction of heat loss)
- walking safety
- easy freight ability
- high partial-planar load bearing
- easy and quick placing (horizontally as well as vertically)
- no need to anchorage or glue
- high ergonomics, variability and surface compactness
- durable or temporary using
- easy exchangeability without operational constraints if a partial part is damaged
- comfort and material handling security augmentation as well as people movement
- easy maintenance
- various designs, thickness and colours
- rich accessories
- various modifications possible (perforation, etc.)
- progressive solution of new as well as old surfaces (revitalization, etc.)
- lowering of acquisition costs in comparison with other bottom material (m², time for work)

various vinyl floor panels designs...
